

We are looking for an mechanical engineer with an specialized education and knowledge in hydraulic

We will launch a new generation of Transmission Control Unit for an automotive customer in our plant in Cuautla / Morelos. This new product combines an electronic control unit with an hydraulic block containing actuators and sensors.

To meet this challenge to combine the technologies of electronic and hydraulic in one subassembly we are looking for an mechanical engineer with an specialized education and knowledge in hydraulic.

He will be part of the production support team, which analyzes rejected products and process problems. The team is also involved in product transfers and new product launches.

We are looking for an engineer with master degree in mechanic, specialized in hydraulic.

We expect knowledge of fluid power theory and hydraulic systems, some practical experience would be welcome.

The candidate should have the ability to investigate, diagnose and solve complex problems of hydraulic applications.

Because our development centers, plants and customers are distributed over the whole world it is necessary to be able to speak and write in English language and to have the disposition to travel.

Start your career now with a global high-tech player that features a distinguished human side.

As a company or as an employer, our commitment to corporate social responsibility is practiced every day. Equal opportunities, work life balance, further training and professional education and early career possibilities are just a few of our core working values. For this reason we encourage self-directed work, project responsibility in innovative fields and collaboration in international teams
